

AIRCRAFT DOCKING SYSTEMS

Aircraft Support Industries (ASI) offers specialist design and construction solutions for companies seeking to acquire aircraft maintenance docking systems.

With over 20 years experience in the industry, ASI has designed, built and installed numerous Docking Systems across the globe. These range from state-of-the-art fully automated combination Docks capable of servicing multiple aircraft, through to single height adjusting access platforms.

- Nose, tail, fuselage and wing docks individually tailored to aircraft and customer needs.
- Combination docks, in which the one dock is designed to suit a range of aircraft types.
- Miscellaneous stair and platform units, including engine and underbelly stands.
- Full or partial automation via the use of pendant and/or remote controls.
- Ground-mounted versus roof suspended Fuselage and Tail docks.

ASI INTELLIGENT DESIGNS

ASI staff are all highly qualified specialists in docking design, with numerous years of experience in the field. Coupled with the use of the latest computer technology in design, and a commitment to the pursuit of engineering excellence, ASI is fully equipped with the ability to offer first class products and services that are unmatched by our competitors.

'Key to designing a successful Docking System is an understanding of the Aircraft, and in particular the various maintenance procedures and associated access requirements. They need to be reliable and failsafe, as well as providing maintenance staff the best possible access to an efficient and safe working environment. In addition to this, careful co-ordination is required to ensure seamless integration with other equipment such as overhead cranes, teleplatforms, and mezzanine.

With these factors in mind, ASI's specialized staff will ensure delivery long term successful docking system that is sure to exceed the end users expectations.'
