Aircraft Support Industries exhibits at the Aviation Week MRO Asia-Pacific Exhibition, Singapore 2016

Aircraft Support Industries (ASI) took part in the Aviation Week MRO Asia-Pacific Exhibition in Singapore on the 27-29th September 2016. This year, ASI's booth was centrally located in the Singapore Pavilion and attracted considerable attention. MRO Asia is an open platform for Aircraft Support Industries to network and develop relationships with other industry leaders. The show focuses on the Maintenance Repair and Overhaul sector and is the go to show for the Asia Pacific region. Post show reports from the organisers indicate a 20% increase in visitors over the previous year with a strong showing from India, America and Japan.

Aircraft Support Industries Stand No. 623

The Indian MRO market offers up enormous potential now that the Government has calmed the draconian tax rules that previously forced the airlines to send their aircraft overseas for maintenance. Typically however, India is a difficult country to do business in due to a high level of bureaucracy and corruption.

In addition to opportune meetings held with customers, taking part in an exhibition such as MRO Asia provides the ideal platform to keep the name of ASI in the forefront as market leaders when it comes to the design and build of aircraft maintenance facilities.

The next major show that ASI is to participate in is the MRO Americas to be held in Orlando, April 2017.

About Aircraft Support Industries

Aircraft Support Industries Group (ASI) is today a world leader in the design and construction of Aircraft Maintenance Facilities having designed and built over 80 hangar facilities worldwide. The Company has the in-house expertise in all disciplines required to design and build state of the art facilities. These include but are not limited to architectural facility planning, structural engineering, mechanical and electrical engineering and fire suppression.
